

? Do you want to close a door while going to your balcony or loggia?

▶ **Balcony latch**

A latch provides easy fixation of a balcony door when you are going outside and prevents its opening, for example, by a draft. In order to come back inside the room, you need to push slightly a door only.

? Do you want to control ventilation of your room?

▶ **Step-by-step ventilation**

Step-by-step ventilation allows you to set several fixed positions of a sash providing airing of your room without drafts. Available range of an air gap is 12-20 mm.

? Do you want to prolong the service life of your windows?

▶ **Windows care set**

A care set provides gentle maintenance of all components of windows and doors made of PVC and aluminum profiles.

▶ AXOR INDUSTRY is an international company, which is specialized in production of hardware for PVC windows and doors and one of the leading enterprises in this sector in CIS countries.

The factory is equipped with up-to-date hi-tech equipment, which provides highly automated manufacturing and meets EU standards.

Our products quality control is carried out for all phases of manufacturing with subsequent testing in our own certified laboratory.

TM AXOR hardware meets all EU standards and was successfully certified by the institute IFT Rosenheim as well as for compliance to requirements of the Ukrainian State Standard (DSTU). Results of testing have showed that TM AXOR hardware guarantees more than 30 000 full tilt and turn cycles that is equivalent to 15 years of a window dynamic exploitation.

That's why, if you think much of quality and comfort, then choose Komfort Line K-3.

about window hardware

Up-to-date hardware for window-and-door assemblies has long been offering consumers more than just different variants of the window opening. Additional functions realized with the help of standard or optional mounted elements are intended to increase considerably comfort and safety in service of PVC windows and balcony doors. For this purpose, the company AXOR INDUSTRY offers such elements to its consumer:

- **Burglarproof elements;**
- **Microventilation;**
- **A wrong operation safety device;**
- **Child lock;**
- **Balcony latch;**
- **Step-by-step ventilation.**

Besides, proper maintenance of hardware facilitates its reliable operation during entire service life. For this purpose, AXOR INDUSTRY offers windows care set, which includes all necessary items for maintenance of the PVC window profile, sealer and hardware.

KOMFORT LINE K-3

Beschläge für Fenster und Türen

? Do you live on the ground or the top floor?

▶ Burglarproof hardware

Hardware, including burglarproof elements, provides additional protection of your home against illegal entry outside. Komfort Line K-3 offers optional use of such elements. They include a corner transmission and a middle lock equipped with mushroom pins. In combination with special safety locking and safety tilt locking plates they make significantly difficult window-breaking by illegal intruders. If you choose hardware with burglarproof elements, your house security will be considerably improved.

? Do you need fresh air flow in cold season without cooling your room?

▶ Microventilation

Microventilation serves for the room airing in cold season avoiding a draft, which can occur during a sash is in «tilt» position. A little gap between a sash and a frame provides constant flow of fresh air and does not influence substantially on heat losses in the room.

? Do you want to avoid occasional opening and hanging down of a sash?

▶ Wrong operation safety device

The device serves for a sash lifting during closing and prevents its hanging down in operation. It allows you to unload hinges and make the window closing more soft and smooth. A wrong operation safety device prevents occasional «opening» of the window in «titl» position of a sash, when the window is hanging on one lower hinge only and «stay arm» of the upper hinge will be disconnected, that may cause hardware damage. In other words, the wrong operation safety device disables rotation of a handle when a sash is in «tilt» position and protects the window from user actions by mistake.

? Do you take care of little children safety?

▶ Child lock

A special device avoiding a sash opening, that provides safety for little children as well as creates additional protection against entry of illegal intruders through the window. Hereat, the device design and location in the bottom of a sash allow you to air the room at ease.
