Concealed hinges system ELITE+

Introduction

Concealed hinges system ELITE+

The constructive of fully concealed hinges system is different from traditional one. Mechanical elements of hinges are completely hidden and integrated into the clearance (the distance between a frame and window's sash rebate). Visually, they are invisible, both indoors and from the street. Such constructive has a few advantages: modern window design and additional functionality of a window structure.

This catalog presents variants of fully concealed hinges' completing with window hardware Komfort Line K-3 Smart & Quick system for PVC windows. What allows producing translucent structures with different levels of resistance to burglary. This is achieved through the use of mushroom shaped cams in combination with the required number of security locking plates with which the final product is equipped.

ELITE+ benefits

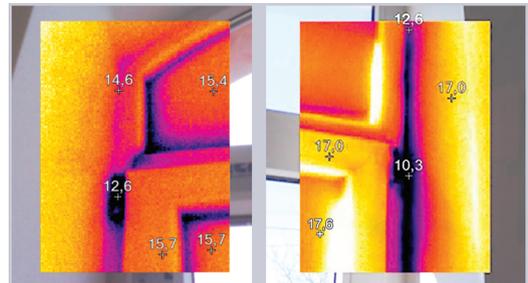

Original design

Only a window - and nothing more! Concealed hinges make it possible to create unique window design and combine it harmoniously with an interior. The absence of visible elements allows you choosing the color of window's lamination without reference to the shade of decorative covers. Windows with concealed hinges are particularly relevant when creating original and elegant interiors, as well as the reconstruction of historical objects.

Improved thermal insulation

Through the use of concealed hinges it is providing additional gasket pressure sashes to a frame and bigger air-tightness of a structure. In addition, concealed hinges do not interrupt the contour of window seal, therefore blowing / frosting in area of hinges are excluded.

Increased burglary resistance

Concealed hinges are not visible from outside, so an intruder is extremely difficult to reach mechanism in hinges area. Together with other anti-burglar elements of a window, concealed hinges are able to protect a house from uninvited guests, including the anti-burglar class RC2.

Compatible with any window jamb

Due to the construct of concealed hinges, when a window is opened, a sash is moving to the center. This simplifies requirements of window jambs' location.

Convenient opening width

Concealed hinges make it possible to open a window's sash up to 100 degrees. Taking into account, features of various window designs and individual needs in operation of a window, it is possible to install an opening limiter. This will limit the turning of a sash at a certain angle and prevent its strikes against of a window jamb.

AXOR INDUSTRY reserves the right in the process of further improvement and development to make technical changes to products ELITE + and Komfort Line K-3 Smart & Quick, as well as to change packaging norms.

The quality of elements' plating

Introduction

Protective plating

The quality of window hardware's plating parts has a great influence on its work, life and appearance.

Special technology of galvanic zinc plating allows obtaining high-quality coating that provides details of the hardware KOMFORT LINE K-3 Smart & Quick required level of corrosion protection.

At the same time, the silver color of window hardware's surface performs decorative function, allowing it to combine successfully with rest window's elements.

Causes of corrosion on the hardware

- 1) Prolonged exposure of high humidity (more than 70%).
- 2) Air polluted with industrial gases, containing compounds of various acids and exposure of salt mists.
- 3) Mechanical damages of the surface during installation or maintenance, violating integrity of the plating.
- 4) Detergents containing alkalis, acids, etc.
- 5) Frequent formation of condensation on the window hardware due to sudden temperature fluctuations.
- 6) Contamination with building materials, in particular with cement or gypsum plaster.

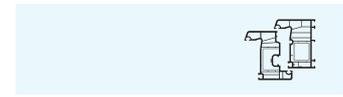

Guidelines for saving surface plating quality

- 1) Avoid contact with the building materials (plaster, cement, various mortars and construction dust).
- 2) Avoid exposure to the window hardware aggressive acid - containing vapors, and exposure of salt mist
- 3) Do not use seals that can absorb and retain moisture.
- 4) Clean the window hardware only with neutral pH products in diluted form.
- 5) Avoid mechanical damage to the surface with construction, installation and cleaning tools.

Hardware storage conditions

Rules apply to storage, transportation, unloading and loading. In the forced transportation under the open sky (e.g. production site) during precipitation use tape or similar protection from humidity and dampness. Storage is allowed only in specially enclosed spaces, not outdoors. To avoid condensation during transportation and storage.

- 1) Always keep the packaging closed. Always close (cover) the packages that were opened and do not to put them directly on the floor.
- 2) Transportation is only for vehicles intended for this purpose (if it is possible, on pallets with stretch tape).
- 3) Hardware mustn't be wet. Packaging must remain dry. (Recommended: Temperature in a warehouse - 15-25°C; Relative humidity - less than 50%).
- 4) In the case of wet packaging, remove parts from it, dry them and check for corrosion. Pack suitable parts in dry condition.

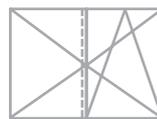

Basic designations

	maximum sash weight in kg		cylindrical locking pin
	screws (quantity / size)		burglar retardant locking pin
	norm of packing (pieces)		drill bit (diameter)

tilt and turn sash

double sash window with main tilt and turn sash

single turn sash

single tilt sash

Presentation of information

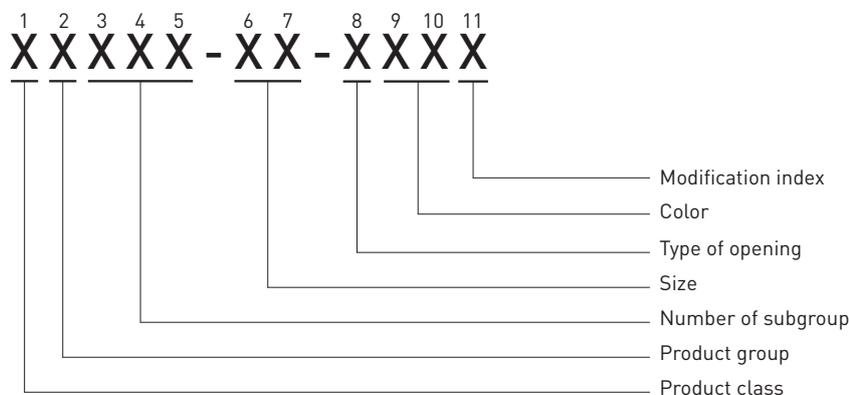

All part number codes in the catalog are presented in alphanumeric form. Decoding part numbers can be found on pages 5-6. The dimensions shown in the catalog are nominal and contain general tolerances.

All sizes are in mm.

Information about sash's dimensions limitations should be taken from catalog's diagrams or installation manual.

Structure of a part number code

**1. Product class
(1st sign)**

XXXXX-XX-XXXX

- “S” – smart line
- “K” – komfort line
- “A” – element refers to both classes

**2. Product group
(2nd sign)**

X**X**XXX-XX-XXXX

- | | |
|----------------------------|--|
| “0” – alternative value | “6” – standart locking plates, tilt locking plates |
| “1” – gear variable | “7” – locking plates and the other accessories |
| “2” – corner transmissions | “8” – alternative value |
| “3” – stay arm | “9” – alternative value |
| “4” – extensions | |
| “5” – hinges | |

**3-5. Subgroup number
(3rd, 4th, 5th sign)**

XX**XXX**-XX-XXXX

Additional information about product’s subgroup.
Example: group “gears”, subgroup “double sash lever espagnolette variable”.

**6-7. Size
(6th, 7th sign)**

XXXXX-**XX**-XXXX

Important dimensions of the product such as the length of the axis, etc.

**8. Type of opening
(8th sign)**XXXXX-XX-**X**XXX

"N" – universal

"R" – right

"L" – left

**9, 10. Color and plating
(9th and 10th sign)**XXXXX-XX-X**XX**X

The ninth symbol indicates the color hue:

0 – basic color. For example, RAL9016 is the basic for white color, it is indicated by the code **01**; RAL8022 is the basic for brown color – **02**, etc.

1 – additional color. For example, RAL8019 for brown color – **12**.

2...9 – following additional colors.

The ninth symbol indicates the color:

0 – plating

4 – champagne

8 – steel surface

1 – white

5 – gold

9 – special colors

2 – brown

6 – bronze

3 – silver

7 – black

By default, all surfaces are glossy and this is not indicated separately in the article. Matte surfaces are marked with the letter **M** after the 10th symbol.

**11. Modification index (A, B, C)
(11th sign)**

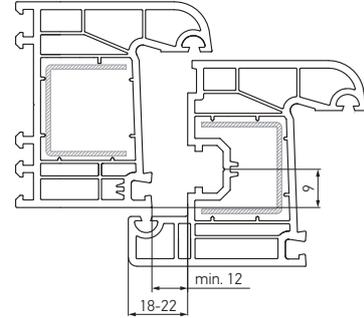

**Section of PVC profiles
for single sash and double one**

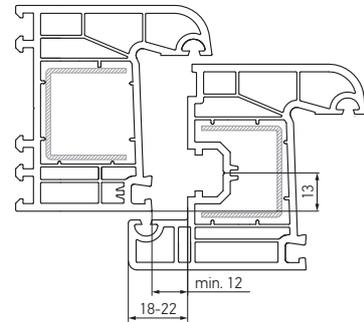

Introduction

The single sash constructions

Sash rebate gap (A):	min. 12 mm
Sash overlap (C):	18 – 22 mm
Sash groove position (B):	9 mm

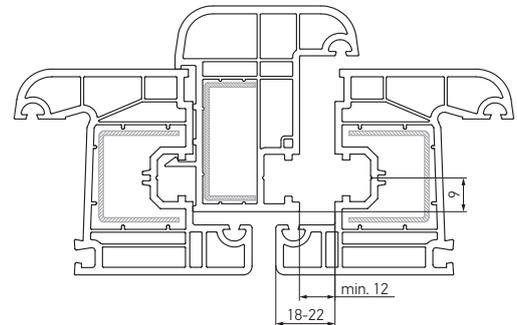

Sash rebate gap (A):	min. 12 mm
Sash overlap (C):	18 – 22 mm
Sash groove position (B):	13 mm

The double sash constructions with opposite hardware groove

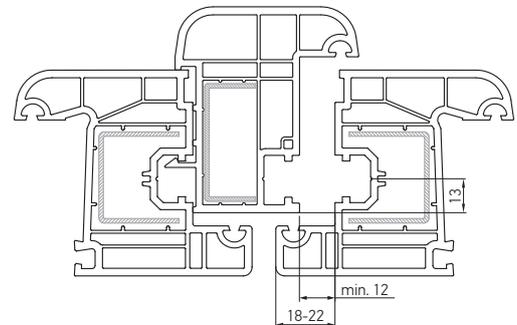

Sash rebate gap (A):	min. 12 mm
Sash overlap (C):	18 – 22 mm
Sash groove position (B):	9 mm

The handling of a passive sash with double sash's gears K1002-XX-N03

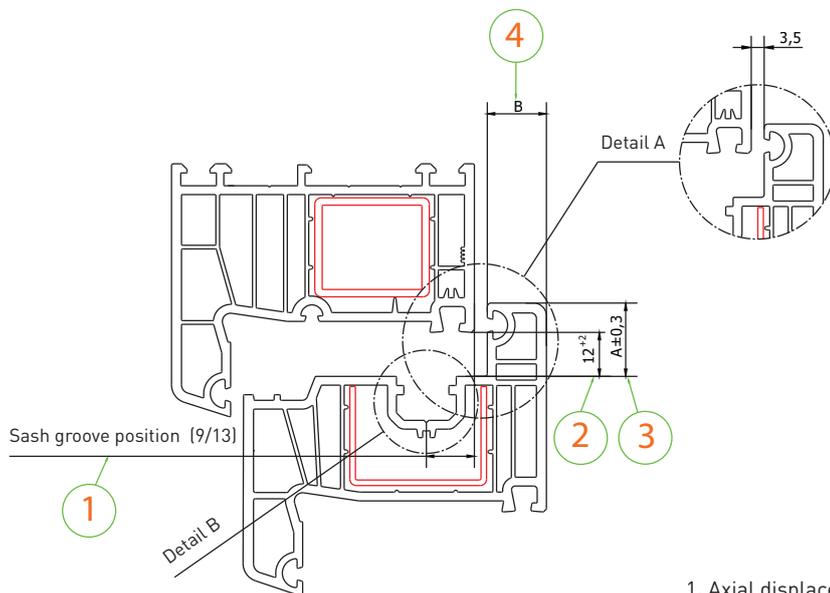

Sash rebate gap (A):	min. 12 mm
Sash overlap (C):	18 – 22 mm
Sash groove position (B):	13 mm

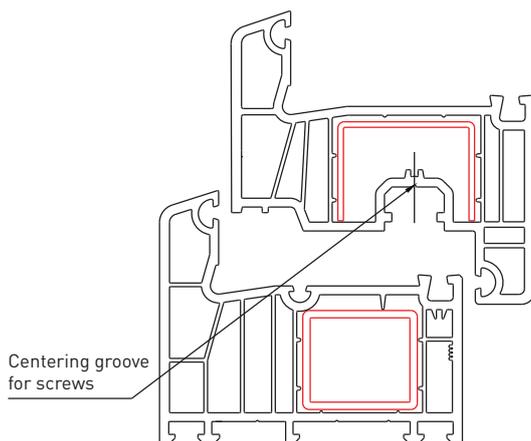

The handling of a passive sash with double sash's gears K1002-XX-N03

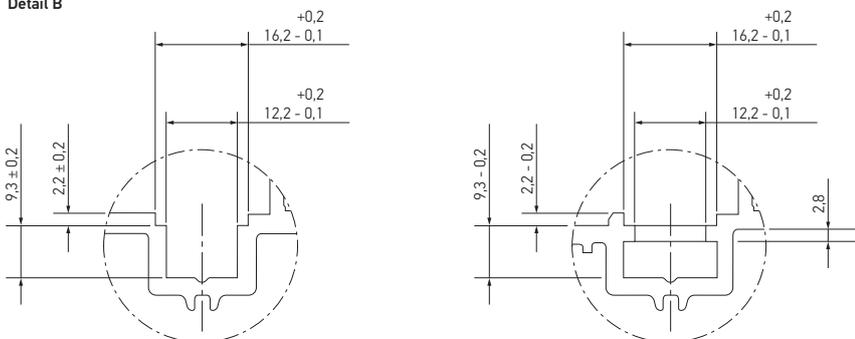

The information about profile-dependent elements you find at the profile list

1. Axial displacement of the fitting groove.
2. Distance required moving the hardware.
3. Value of the sash overlap.
4. Thickness of sash's overlap. The value on which depends necessary clearance for hinge operation.

Detail B

Dimensional compliance for for PVC profiles according to RAL as of February 1998

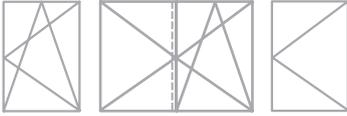

Gütegemeinschaft Schösserund Beschläge e.V., Offerstr. 12, 42551 Velbert

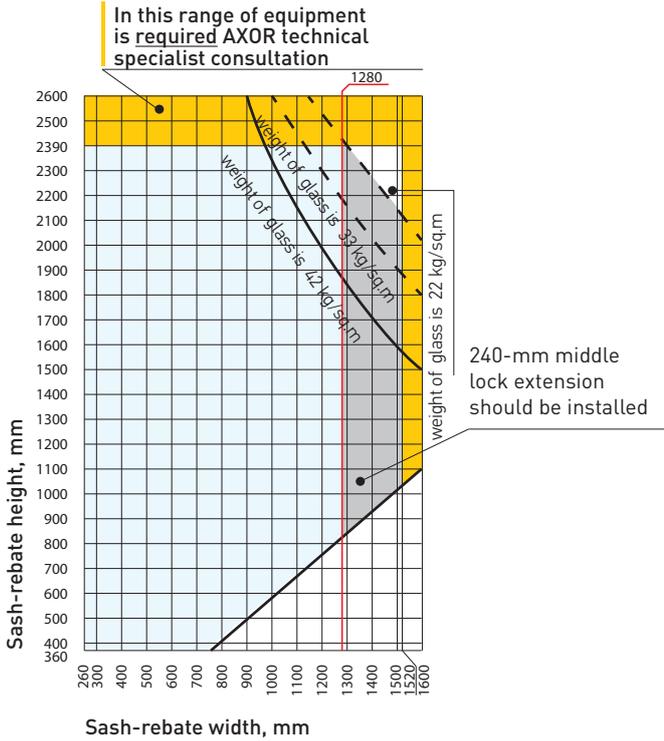

Application range diagrams

Introduction

Single turn, tilt and turn and double sash design

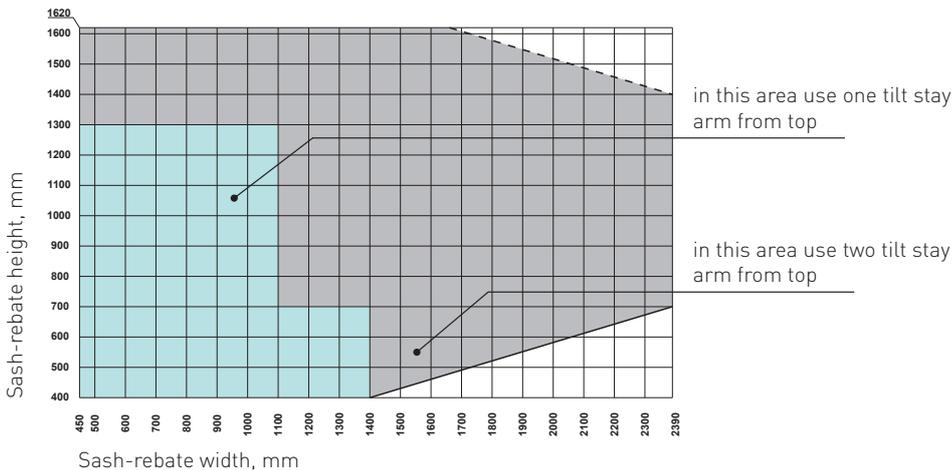

Valid sash's size
 Permissible sash's weight for this range is 130 kg max.
 1 mm / m² glass thickness = 2.5

Tilt sash

Limit of sash's dimensions.
 Maximum permissible sash's weight is 50 kg

Minimum hinges' clearance

Tools / Installation / Adjustments

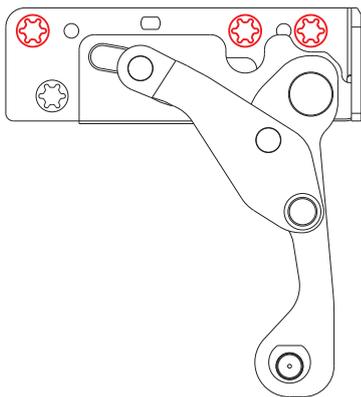

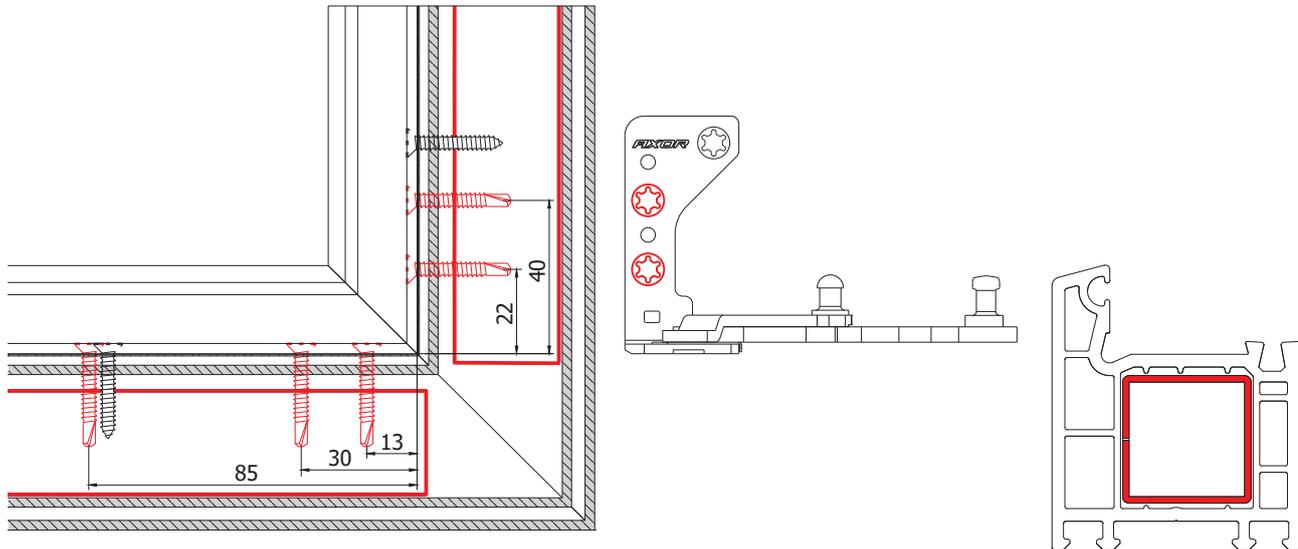

Thickness of overlap, mm	X (gap, mm)
15	3,5
18	5,5
22	8,5

Recommendations

Tools / Installation / Adjustments

Recommendations for usage of reinforcing profile in a frame

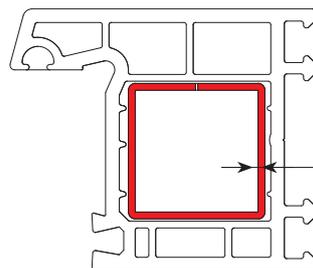

All screws must be installed into the reinforcing profile

Minimum sizes of clearance between a frame and a sash:

- Bottom min. 12,5 mm
- Top min. 12 mm
- Left / right min. 12 mm

For manufacturers of translucent constructions it is recommended to reduce the sash size by 0,5-1 mm in HEIGHT (total height rebate 24,5-25 mm) in relation to the sash size with visible hinges (total height rebate 24 mm).

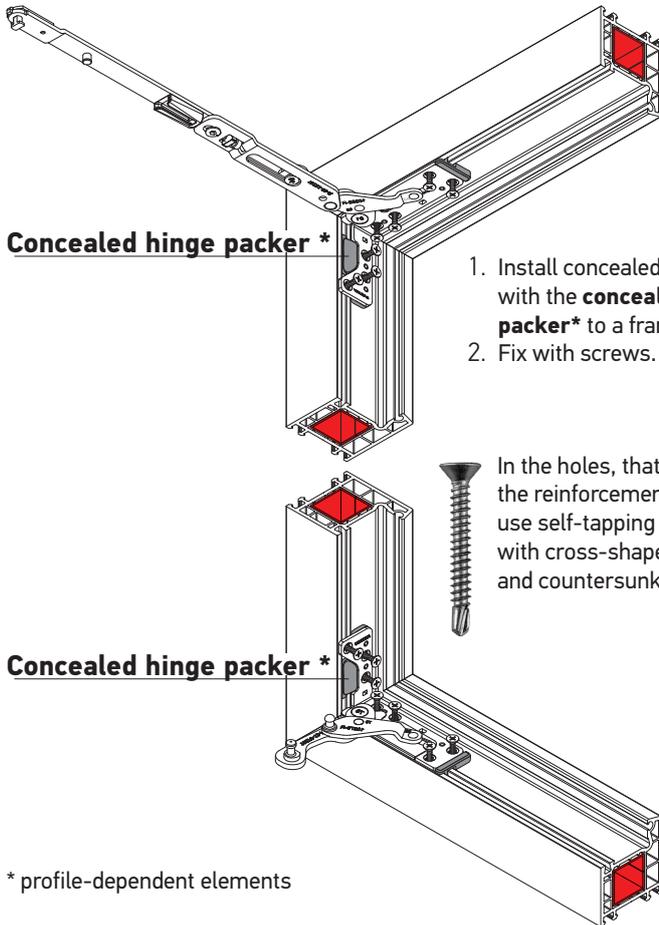

Reinforcing profile - square, thickness min. 2 mm

Hinges' installation

Tools / Installation / Adjustments

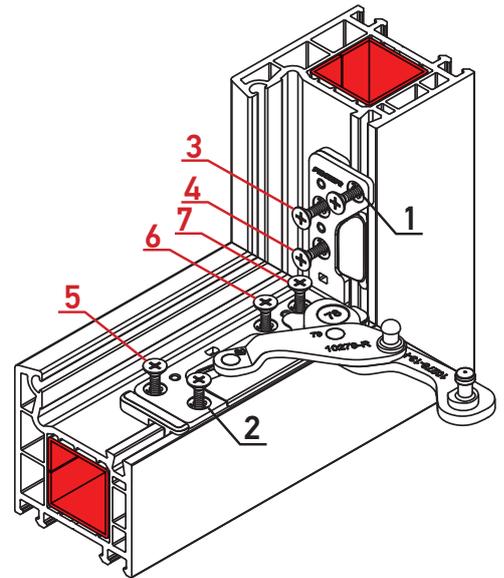

Hinges' installation on a frame

1. Install concealed stay arm with the **concealed hinge packer*** to a frame.
2. Fix with screws.

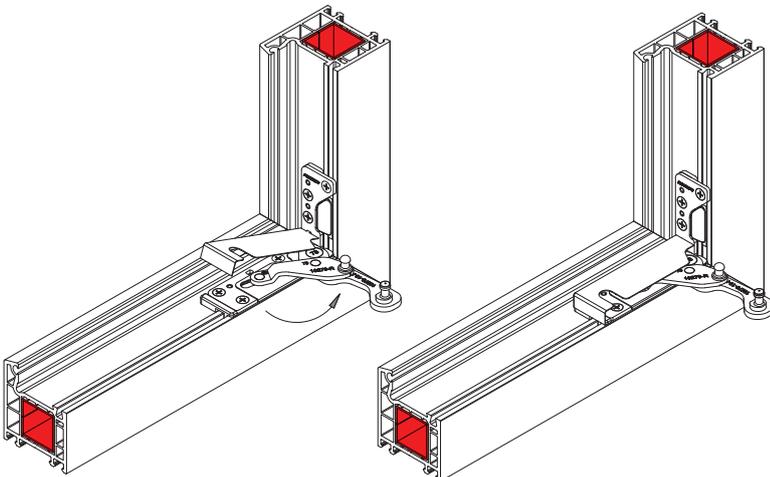

In the holes, that go through the reinforcement steel, use self-tapping screws 4.5 * 38 with cross-shaped slot and countersunk head.

- Screwing procedure:
- Screws **1** and **2** for PVC in the groove for glassing bead
 - Self-tapping screws **3-7** into reinforcement steel
 - Screw the screw **7** with an extended screwdriver bit or a manual screw driver.
 - Strictly observe the perpendicular axis when tightening the screws.

Installation of a decorative cover

1. Open the hinge.
2. Install the cover in a hole on vertical part of the hinge.
3. Fasten the cover on horizontal part of the hinge.

D

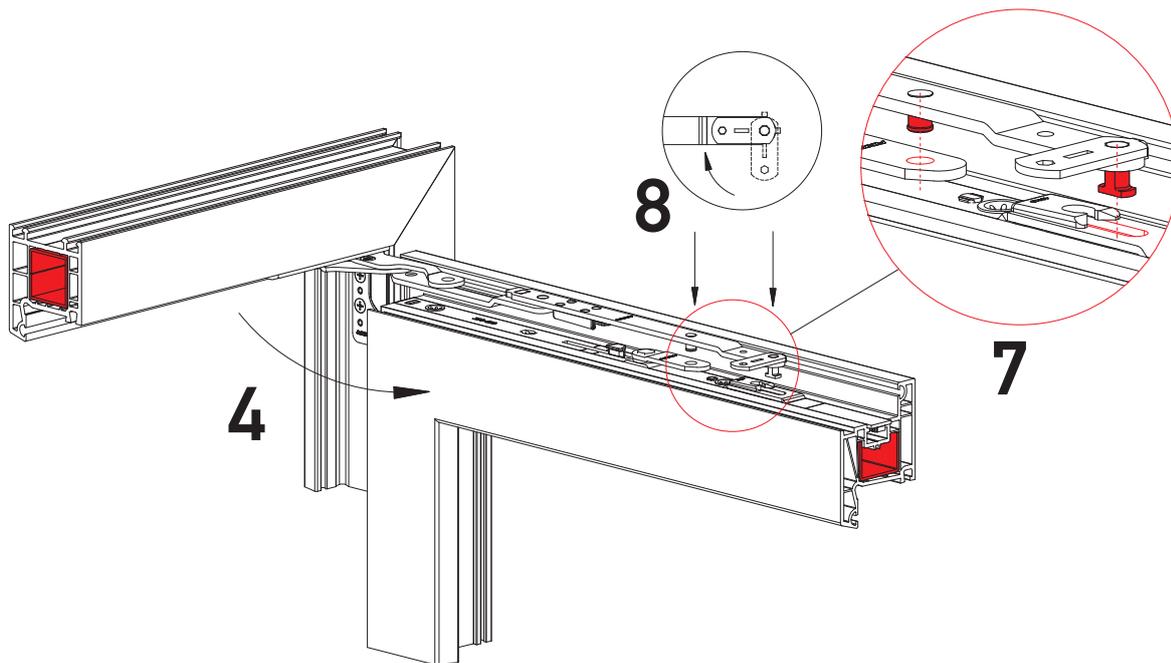

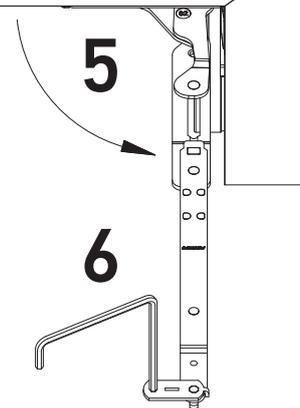

Sash's installation

Tools / Installation / Adjustments

1. Move the wrong operation safety device to the "middle" position and turn a handle to the "tilt" position.
2. Open the concealed bottom hinge at an angle of $\approx 5-10^\circ$, until the mark coincides with the lever.
3. Slightly tilting a sash to install it on the concealed bottom hinge.

4. Open the sash at 90° .
5. Open the concealed stay arm.
6. Turn a locking plate using hex 4mm, until it stops.
7. Connect the concealed stay arm with the concealed stay arm connecting plate and close the locking plate.
8. Block the locking plate on the stay arm.
9. Rotate the handle into the turn position
10. Turn the wrong operation safety device according to direction of opening
11. Close the sash.

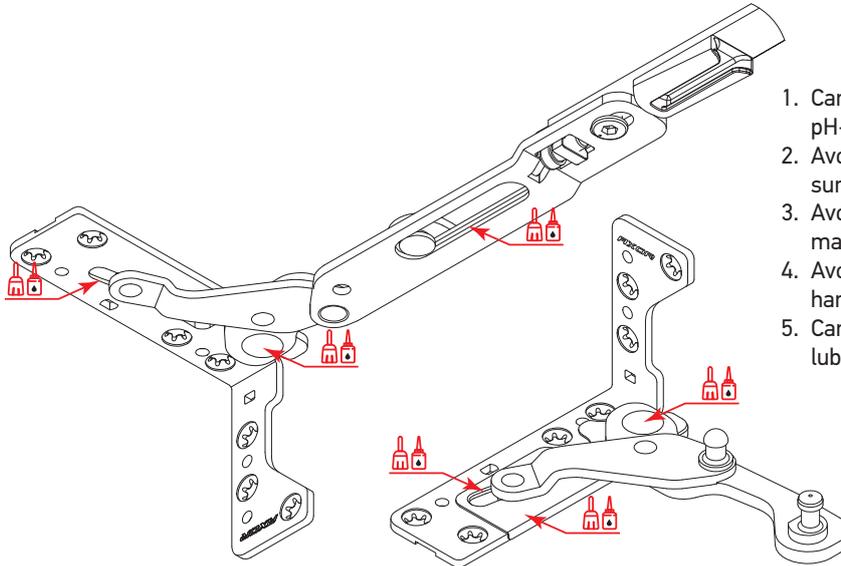

Care of hardware Adjustments

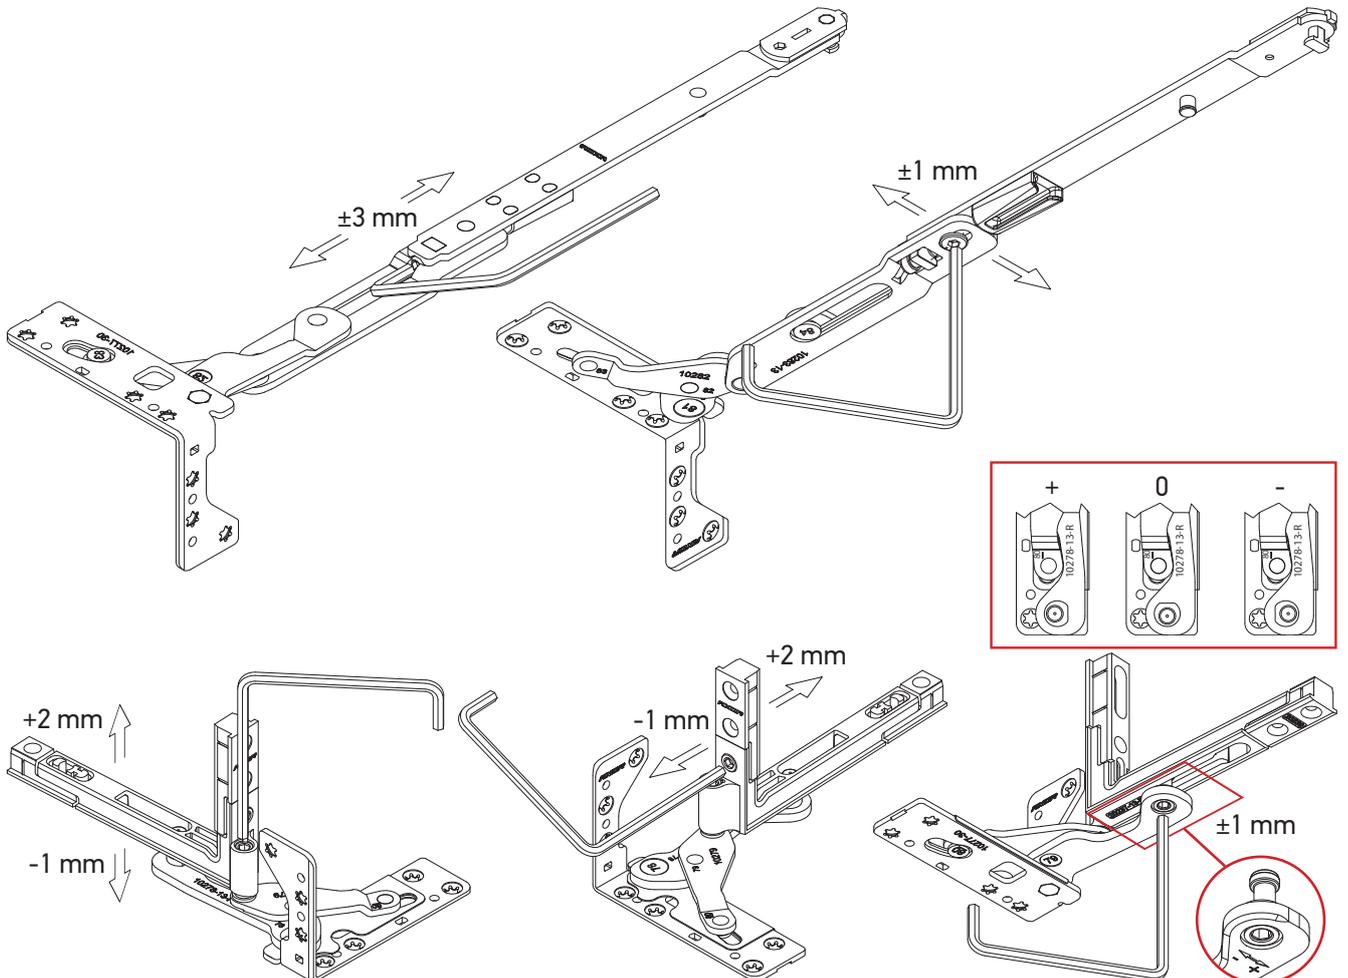

Tools / Installation / Adjustments

For reliable and long-term working of window hardware it is necessary to adhere to simple rules of operation:

1. Carry out cleaning of hardware with pH-neutral means
2. Avoid mechanical damage to elements and their surface
3. Avoid contact of window hardware with building materials
4. Avoid exposure of aggressive acid vapors to window hardware
5. Carry out regularly (1 time per year) cleaning and lubrication of all major components of hardware
